

**IN THE CLAIMS**

Amend claims 5-7 and 9-15 as follows:

- 1-4. (Canceled)
5. (Currently amended) A computing machine implemented method of evaluating media, the method comprising the steps of:
  - sensing properties of media including the location of any imperfection in the media;
  - evaluating any imperfections in one or more predefined critical locations on the media;
  - generating a first damage value based on the imperfections in the critical locations;
  - evaluating any imperfections in any non-critical locations on the media;
  - generating a second damage value based on the imperfections in the non-critical locations; and
  - combining the first and second damage values to generate a single damage index.
6. (Currently amended) ~~A~~ A computing machine implemented evaluation module for coupling to a sensing arrangement, the evaluation module comprising:
  - a classifier including first evaluating means for evaluating any imperfections in one or more predefined critical locations on the media and generating a first damage value, second evaluating means for evaluating any imperfections in any non-critical locations on the media and generating a second damage value, and combining means for combining the first and second damage values to generate a single damage index.

7. (Currently amended) ~~An~~ A computing machine implemented evaluation module according to claim 6, further comprising a number of classifiers, and a second level classifier for receiving the single damage index from each classifier and for generating a suitability index therefrom.

8. (Canceled)

9. (Currently amended) A computing machine implemented method of evaluating media, the method comprising the steps of:

- sensing the media;
- detecting one or more physical imperfections in the media;
- determining properties of each of the imperfections in the media;
- generating a damage index associated with each imperfection based on the determined properties; and
- generating a single suitability index based on a combination of each damage index.

10. (Currently amended) A computing machine implemented method of evaluating media, the method comprising the steps of:

- sensing the media;
- detecting at least one physical imperfection in the media;
- determining properties of each imperfection in the media;
- generating a damage index associated with each imperfection based upon the determined properties of the imperfection; and
- generating a single suitability index based upon a combination of each damage index.

11. (Currently amended) ~~An~~ A computing machine implemented evaluation system for evaluating media, the system comprising:

sensing means for sensing properties of media including the location of any imperfection in the media; and

an evaluation module for evaluating imperfections in the media, the evaluation module comprising an artificial neural network and a fuzzy system;

wherein the evaluation module includes a classifier including first evaluating means for evaluating any imperfections in one or more predefined critical locations on the media and generating a first damage value, second evaluating means for evaluating any imperfections in any non-critical locations on the media and generating a second damage value, and combining means for combining the first and second damage values to generate a single damage index.

12. (Currently amended) A computing machine implemented evaluation system according to claim 11, wherein the first evaluating means comprises a fuzzy system, and the second evaluating means comprises an artificial neural network.

13. (Currently amended) A computing machine implemented evaluation system according to claim 11, wherein the evaluation module includes a plurality of classifiers, and a second level classifier for receiving the single damage index from each classifier and for generating a suitability index therefrom.

14. (Currently amended) ~~A~~ A computing machine implemented evaluation module for evaluating imperfections in media, the evaluation module comprising:

a classifier including (i) a fuzzy system for evaluating any imperfections in one or more predefined critical locations on the media and generating a first damage value, (ii) an artificial neural network for evaluating any imperfections in any non-critical locations on the media and generating a second damage value, and (iii) combining means for combining the first and second damage values to generate a single damage index.

15. (Currently amended) A computing machine implemented evaluation module according to claim 14, further comprising (i) another classifier, and (ii) a second level classifier for receiving the single damage index from each classifier and for generating a suitability index therefrom.
